

# RISKS AND MITIGATIONS CONTINUED

● Long-term    ● Escalating

## Top 5 Opportunities for the Group

<b>1. Increase in reserves and resources base</b>	From the very beginning of the relationship established with Sibanye-Stillwater, our approach was to develop it proactively and collaboratively, consolidating all surface tailings in South Africa to grow the value of our existing asset base, and to create opportunity for further growth in surface mining in South Africa and abroad.	Expected to occur
<b>2. Diversification into PGMs</b>		Should occur at some time
<b>3. Mechanisation, automisation and automated data collection and reporting</b>	Further integration of our system of information flow and data capturing will allow us to create a consolidated, sustainable tailings management solution. Key focus areas will continue to be the assurance of the integrity of data, protecting it from interference, maintaining the quality of information and managing its flow and use with the view to optimise our control and management systems.	Expected to occur
<b>4. Increased focus on ESG objectives</b>	ESG, good corporate citizenship and green mining are increasingly important, so our work could and should become the group standard in what we consider to be "evidence of our presence". We aim to unlock land value in partnership with the government, state agencies, public and private partnerships and emerging operators. This will become even more important in a post COVID-19 world.	Expected to occur
<b>5. Water technology and alternative green power solutions</b>	We have the opportunity to work with government and other stakeholders in solving water supply constraints in South Africa by optimising our closed water circuit and the re-use of AMD and treated sewerage. Excess power, generated through alternative green power solutions, may be "wheeled" onto the National grid or to other operations and alleviate power supply shortages in South Africa.	Expected to occur
